

Gamma-Ray Bursts as Cosmological Tools

Amir Shahmoradi

Department of Physics, Michigan Tech University

February 2010

Outline

- ✓ *A brief history of time & the Universe*
- ✓ *Introduction to Astrophysical notions & definitions*
- ✓ *Gamma-Ray Bursts (GRBs)*
- ✓ *Can GRBs serve as standard candles?*
 - *Shahmoradi & Nemiroff, The Possible Impact of GRB Detectors on Cosmological Standard Candles, MNRAS, 2009, arXiv:0904.1464v1*
 - *Shahmoradi & Nemiroff, Hardness as a Spectral Peak Estimator for Gamma-Ray Bursts, MNRAS, 2010, arXiv:0912.2148v2*

Example of human error:
The Same Color Illusion
Astronomy Picture of the Day
2007 July 17

Edwin Hubble, Astronomer, 1925

- ✓ *The Universe is unimaginably huge*
- ✓ *The Universe is expanding*
- ✓ *It had a beginning 13.7 billion years ago*
- ✓ *The visible size of the universe:*

13.75±0.11 billion light years

or

$$\square 1.3 \times 10^{26} m$$

2 light seconds

UNREGI
STERED

How did Hubble discover the expansion of the Universe?

Possible Models of the Expanding Universe

How to find the correct cosmological model?

✓ *Cosmological Standard Candle*

- ✓ *Constant Luminosity known*
- ✓ *Spectroscopic Redshift known*

$$D_L = \sqrt{\frac{1}{4\pi} \frac{\text{Intrinsic Luminosity}}{\text{observed brightness}}}$$

✓ *Different cosmological models lead to different definitions of distance,*

$$D_L = \frac{C}{H_0} (1+z) \int_0^z dz' \left[(1+z')^3 \Omega_M + \Omega_\Lambda \right]^{-1/2}$$

Type-Ia Supernovae as Cosmological Standard Candles

SN 2006X, before and after the Type Ia Supernova Explosion
(Artist Impression)

STERED

Supernovae Hubble diagram,

*Kirshner 1999, PNAS,
96, 4224*

Possible Models of the Expanding Universe

Expansion Rate > 0

How to constrain the expansion rate of the universe in the distant universe?

*Candidate
Standard Candle:
Gamma-Ray Bursts (GRBs)*

Supernovae projects: $Z < 1.7$

Gamma-Ray Bursts (GRBs)

- ✓ *Discovered by Vela nuclear test detection satellite (1960s) , Top-Secret project before the collapse of USSR*
- ✓ *The most powerful explosions in the Universe*

$$10^{47} \text{ ergs} < E_{iso} < 10^{55} \text{ ergs}$$

GRB types

*Long-duration GRBs (LGRBs):
possibly related to the death of supermassive stars*

*Short-duration GRBs (SGRBs):
possibly the merger of binary neutron stars*

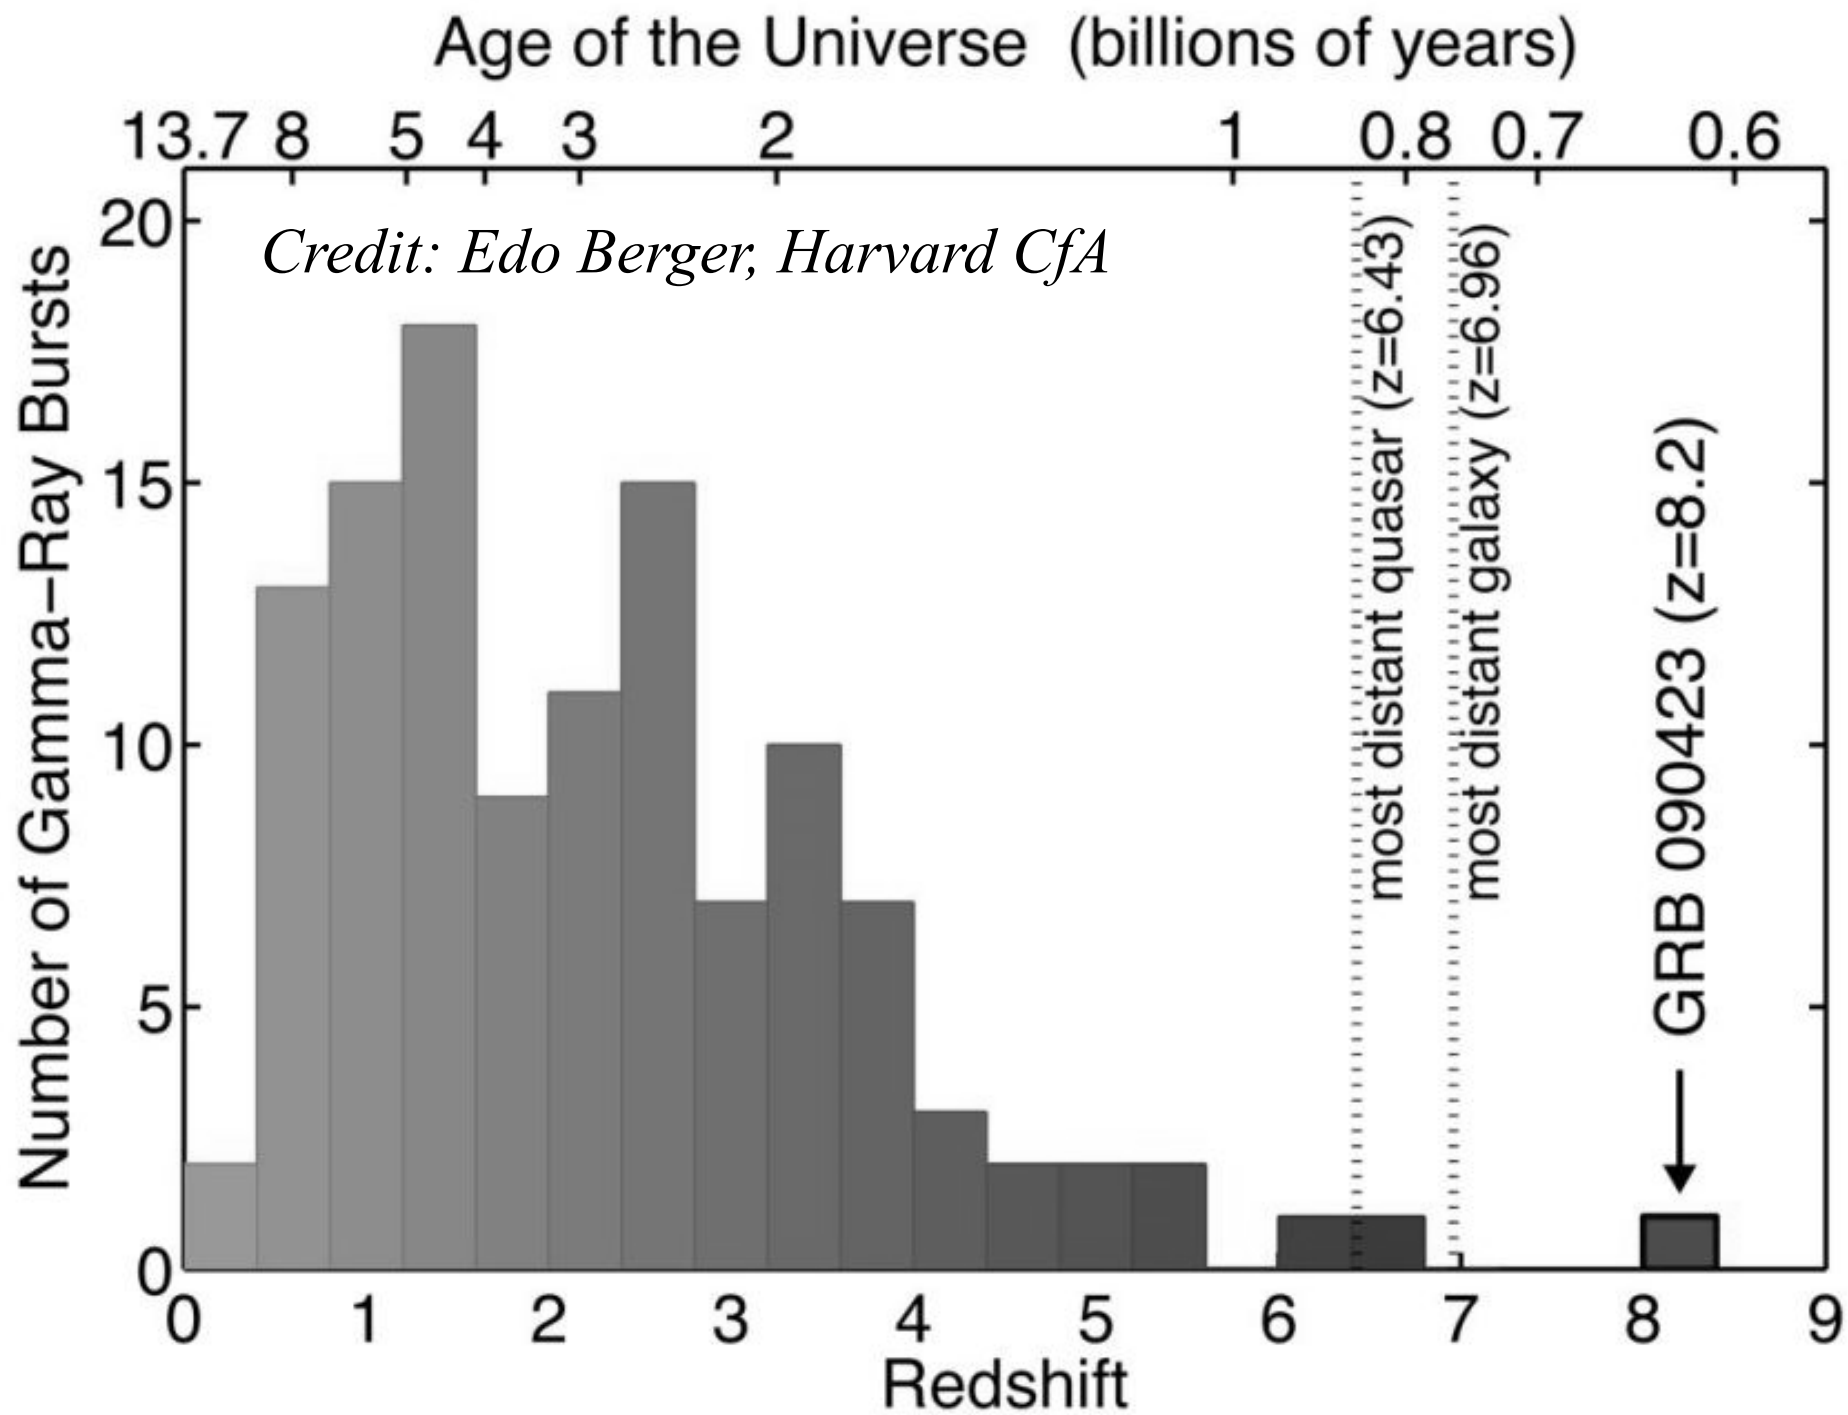

Long-duration GRB (LGRB)

Short-duration GRB (SGRB)

GRB light-curve diversity

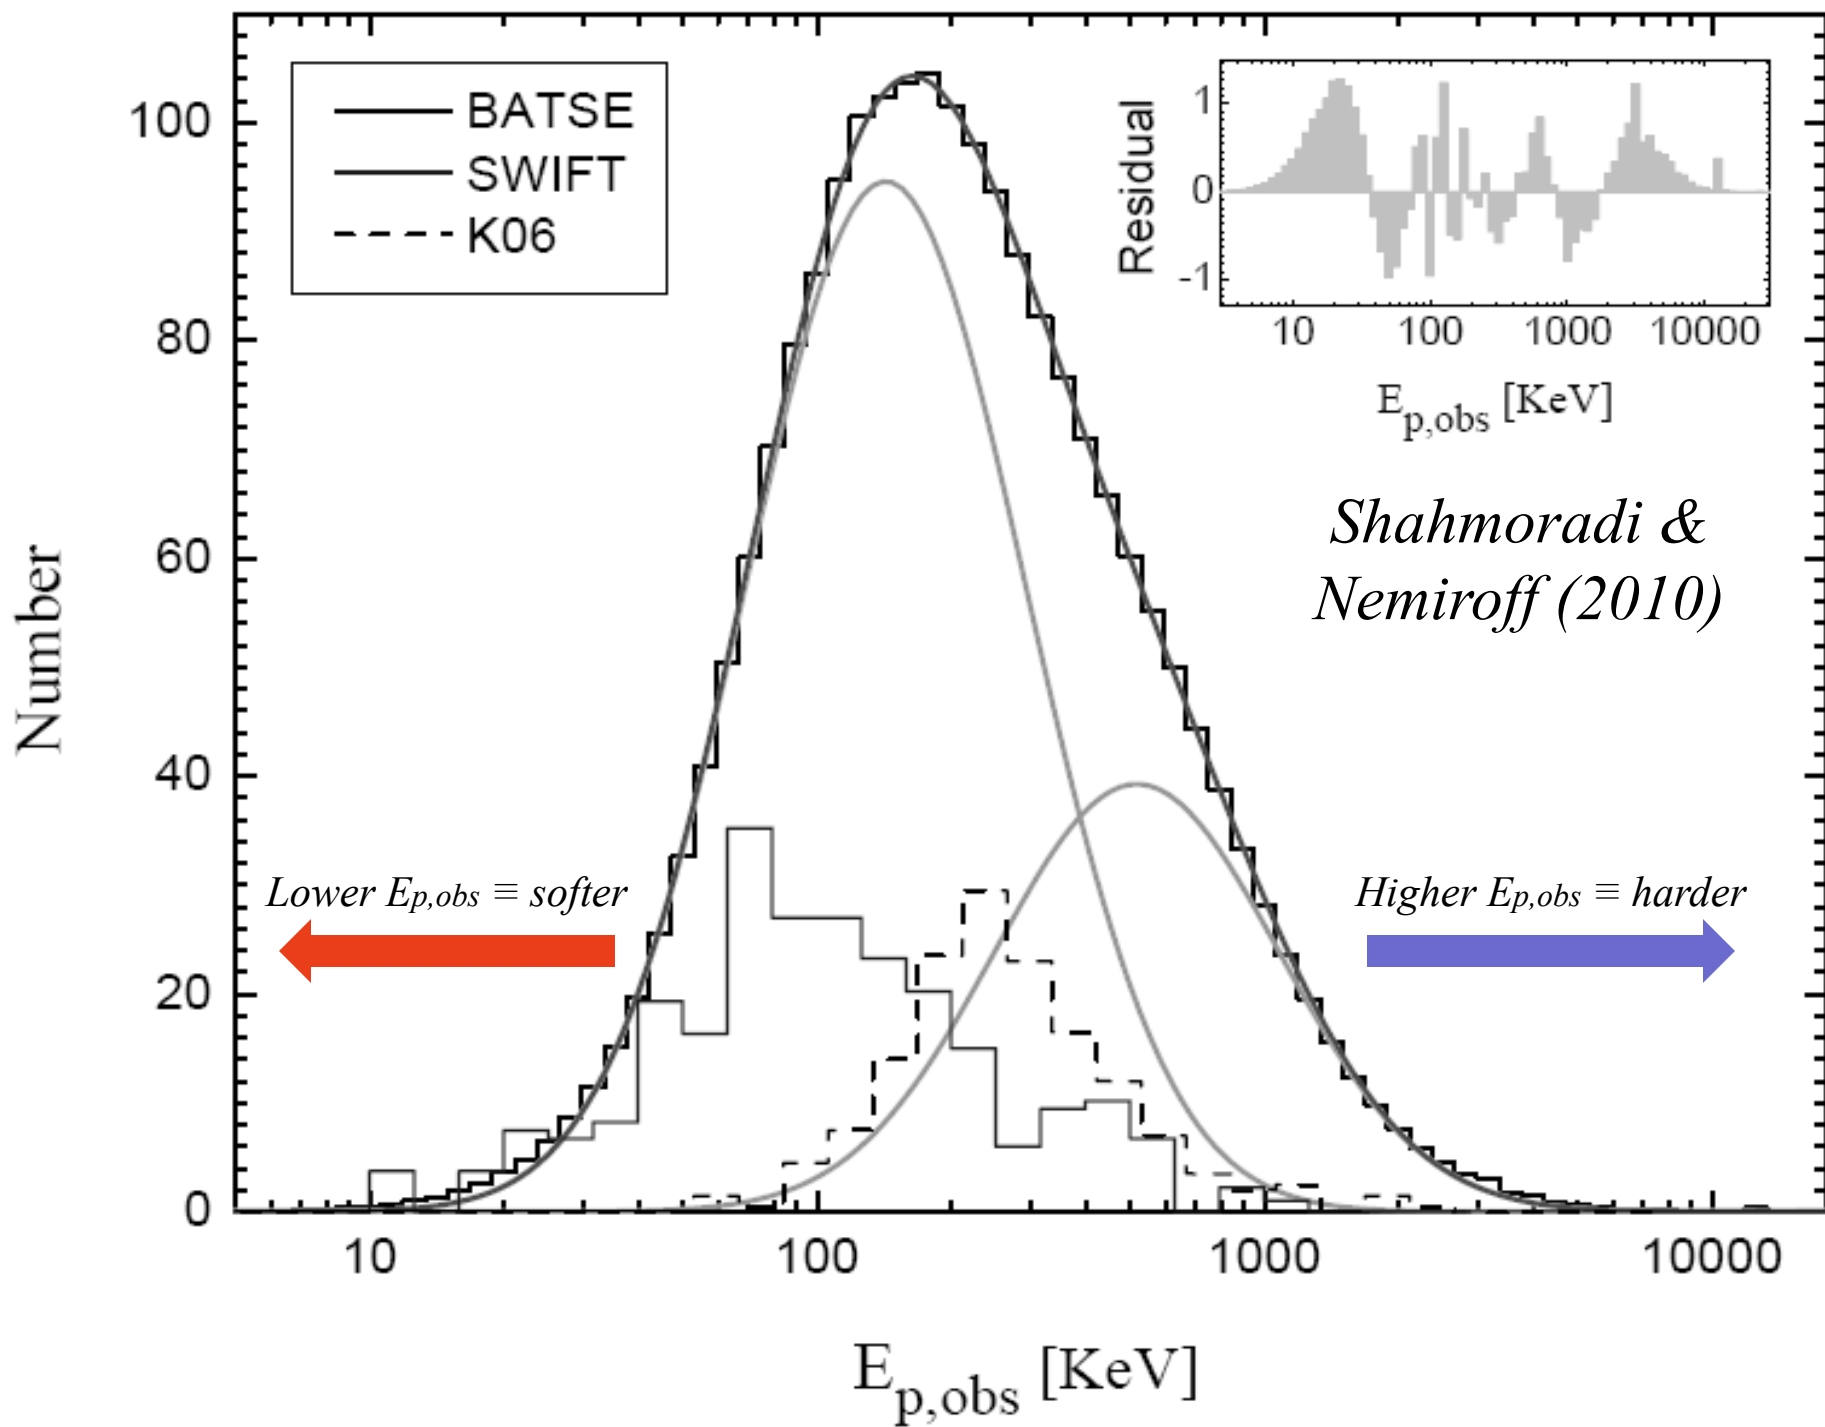

Example of GRB Spectrum

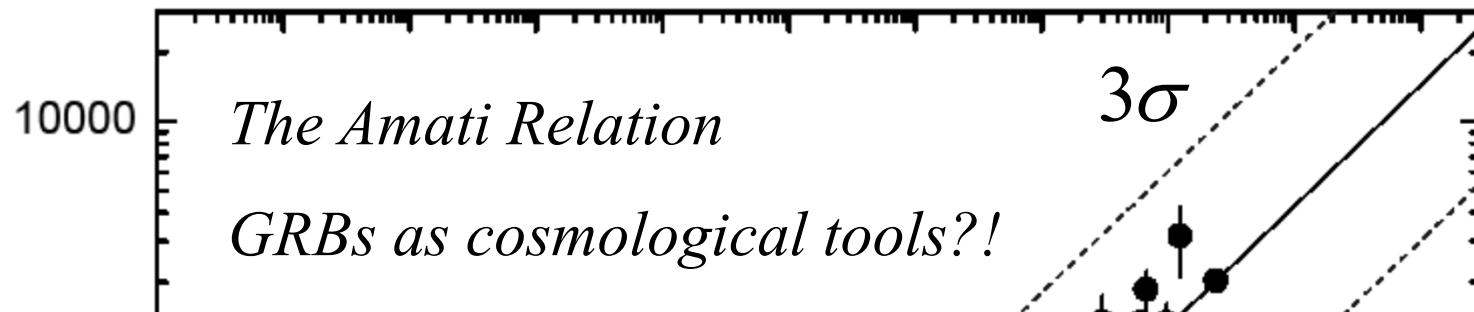

Example of GRB Power Spectrum

Amati (2002)

- ✓ *Cosmological Standard Candle*
 - ✓ *Constant Luminosity known*
 - ✓ *Spectroscopic Redshift known*

$$D_{L,obs} = \sqrt{\frac{1}{4\pi} \frac{E_{iso}(E_{p,int})}{S_{bol}}}$$

Standard Candle

Observer

Problems with GRB relations

- ✓ *no physical basis for GRB relations to date*
- ✓ *frequent number of outliers to these relations*
 - ✓ *All authors have overlooked outliers to these relations in their GRB Hubble diagrams.*

Brightness (S)

<i>Red</i>	<i>25 - 50 keV</i>
<i>Yellow</i>	<i>50 - 100 keV</i>
<i>Green</i>	<i>100 - 300 keV</i>
<i>Blue</i>	<i>> 300 keV</i>

$$HR_H = \frac{S_{\text{Blue}} + S_{\text{Green}}}{S_{\text{Yellow}} + S_{\text{Red}}}$$

time

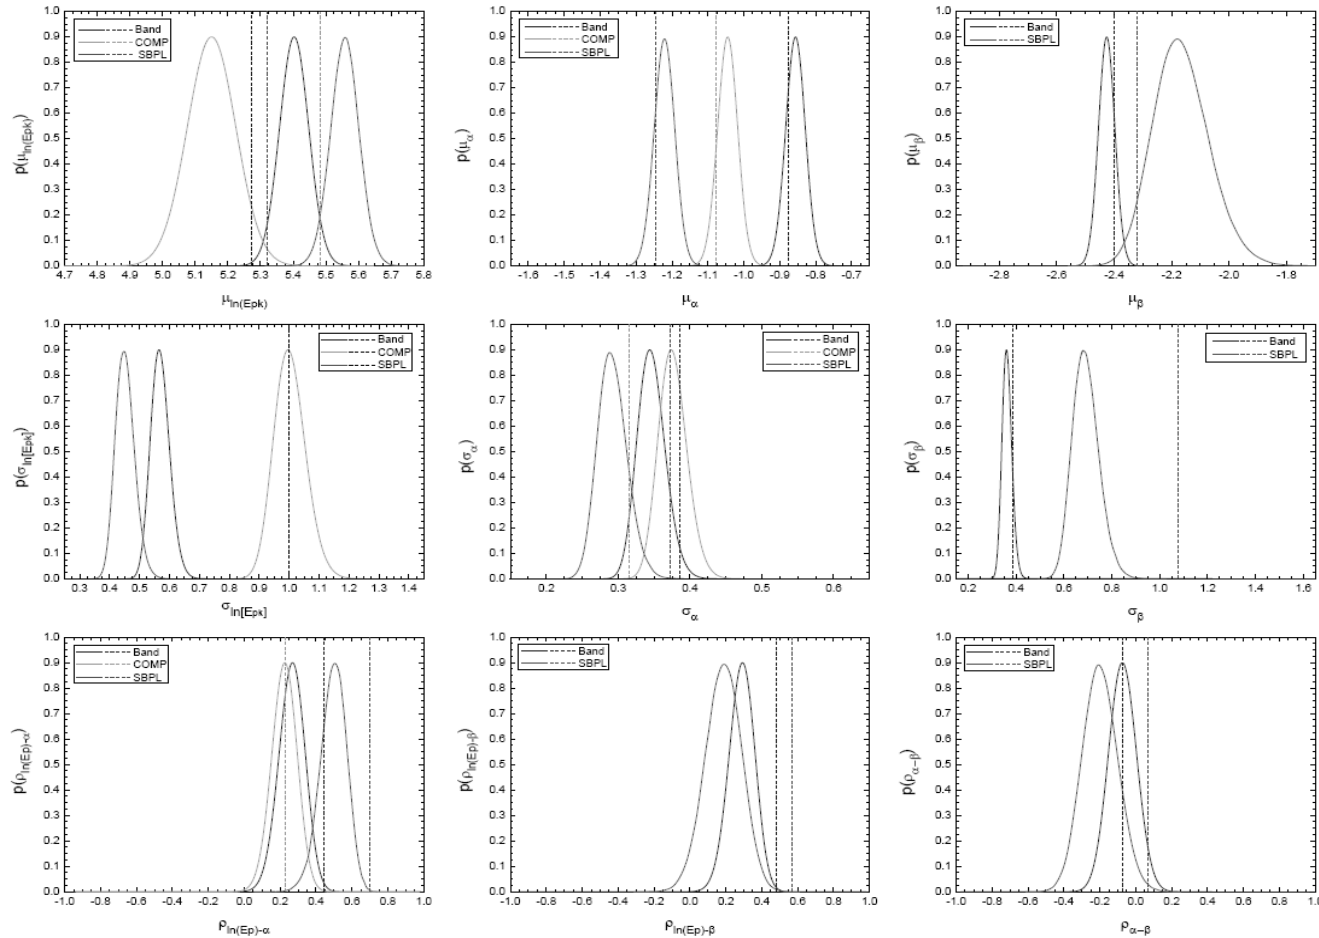

Energy

Parameter estimation based on Bayes Theorem and Markov Chain Monte Carlo techniques.

Posterior distributions of the parameters of the truncated multivariate normal distributions considered for the spectral parameters of the 3 GRB models: Band, COMP(CPL) & SBPL.

*Parameter estimation
based on Minimum χ^2
& Mimimum
Kolmogorov-Smirnov
distance techniques.*

*Marginalized likelihood
contour plots of the
observed data given
different parameter values
of the truncated
multivariate normal
distribution assumed for
the spectral parameters of
the three GRB models.*

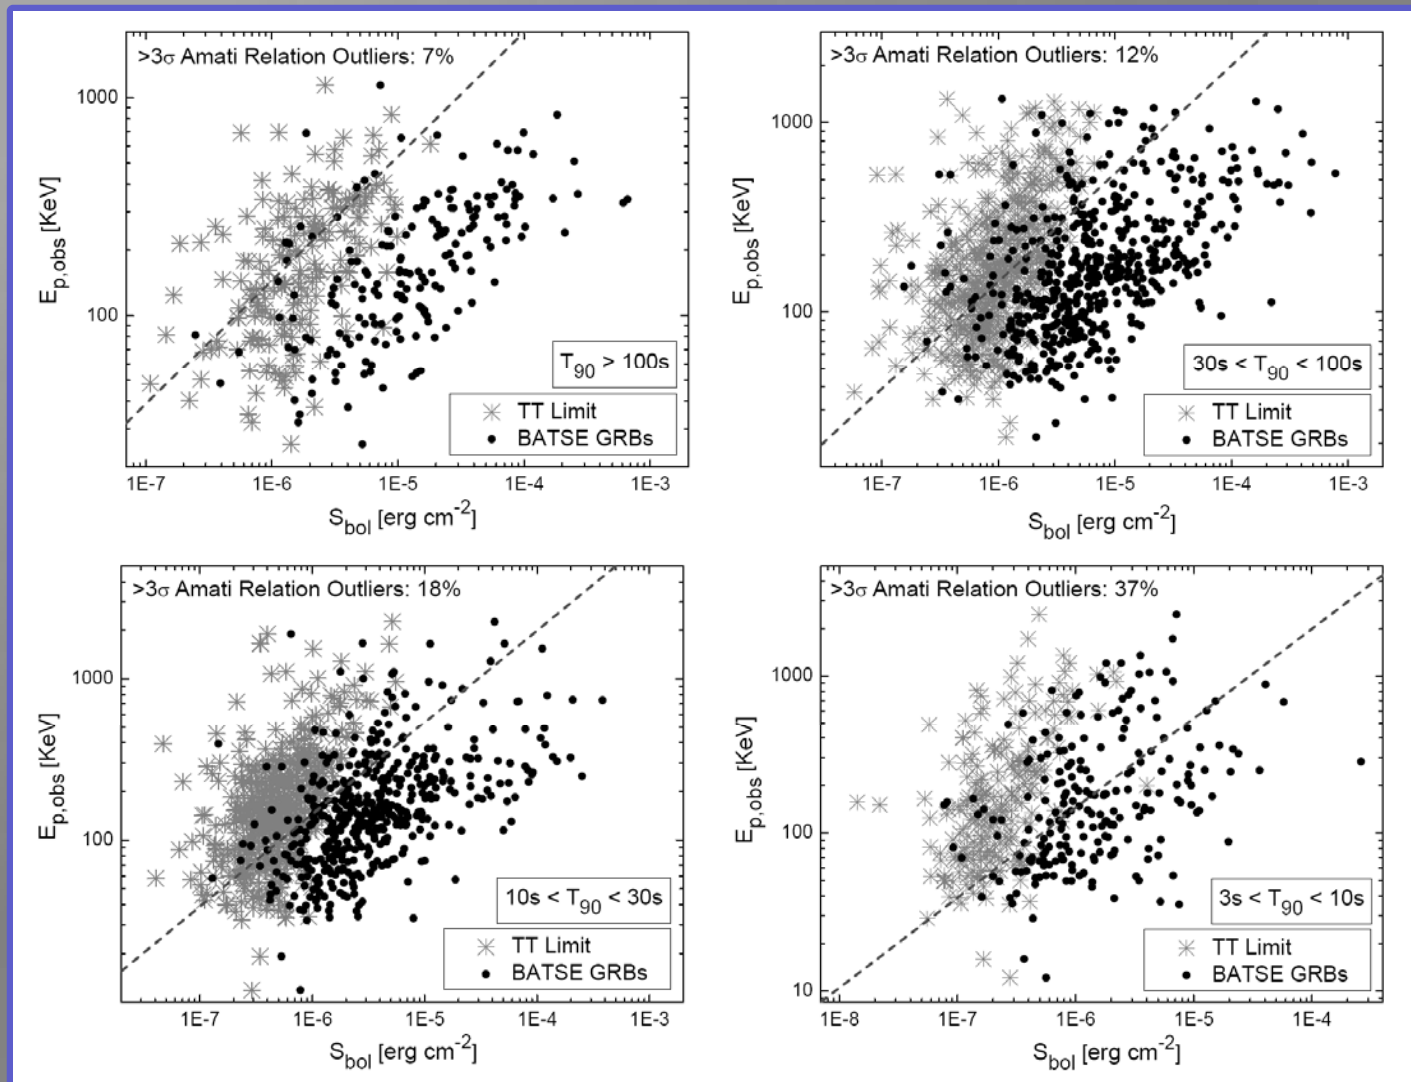

Fuzzy Cluster Analysis

Sum of All Normalized Determinants (SAND), Rousseeuw et al. (1996)

Selection Effects due to GRB Detectors?

✓ *BATSE (1990-2000)*

✓ *Shahmoradi & Nemiroff, 2009, MNRAS*

Summary & Conclusions

- ✓ *Gamma-Ray Bursts are the most powerful events of the Universe, possibly related to the death of super-massive stars.*
- ✓ *Several correlations among the spectral parameters of GRBs have been proposed, such as the Amati relation.*
- ✓ *Numerous attempts has been made by different authors to use these relations to construct the Hubble diagram*
- ✓ *The result of our analyses, however, provide the first direct evidence that the Amati & Ghirlanda relations do not have physical origins and to our estimates, these relations hold as inequalities.*
- ✓ *Although the utility of the Amati relation in cosmology is questioned, GRBs -- expected to be detectable out to $z \sim 65$ -- might still hold the promise as the unique probes of the early universe. Further analysis coming up soon...*

General Conclusions

(Applicable to any field of Science)

- ✓ *Outliers! Take them seriously in data analysis.*
- ✓ *Strong Correlation, No Outlier! Then why should there be such strong*

Acknowledgment

- ✓ *Dr. Ravindra Pandey, Chair, Department of Physics, MTU*
- ✓ *Dr. Robert Nemiroff, Astrophysicist, MTU / NASA*
 - ✓ *Continuous support during the past 3 years.*
 - ✓ *Absolute freedom in research.*
 - ✓ *How to do scientific research rather than what to do.*
